

2.0 Cross section properties to axes going through the centre of gravity

2.1 Profile area	A	43.40			[in ²]
2.2 Co-ordinates of the centre of gravity	Tx	7.74	Ty	6.00	[in]
2.3 Moment of inertia	Ix	459.1550667	Iy	426.4461866	[in ⁴]
2.4 Polar moment of inertia	Ip	885.6012532			[in ⁴]
2.5 Product of inertia	Ixy	0			[in ⁴]
2.6 Minimum moment of inertia	I _{min}	426.4461866	α _{min}	90 °	[in ⁴]
2.7 Maximum moment of inertia	I _{max}	459.1550667	α _{max}	0 °	[in ⁴]
2.8 Radius of gyration	rx	3.25	ry	3.13	[in]
2.9 Bending modulus of section	Sx+	91.83	Sx-	91.83	[in ³]
2.10 Bending modulus of section	Sy+	81.07	Sy-	63.27	[in ³]

3.0 Cross section properties to shifted and inclined axes

3.1 A shift of axes related to the centre of gravity	dx	0	dy	0	[in]
3.2 Axis rotation angle	α	90			[°]
3.3 Moment of inertia	Ix'	426.4461866	Iy'	459.1550667	[in ⁴]
3.4 Polar moment of inertia	Ip'	885.6012532			[in ⁴]
3.5 Products of inertia	Ixy'	2.36746E-15			[in ⁴]

4.0 Properties of homogeneous solids (rotation, extrusion)

4.1 Specific density	γ	486.9	Steel (486,9)	[lb/feet ³]
4.2 Solid created by drawing the profile - beam				
4.3 Length of the beam	L	100		[in]
4.4 Volume of the beam	V	4340		[in ³]
4.5 Mass of the beam	m	1222.885417		[lbf]
4.6 Moment of inertia of masses (Z axis)	Imz	24953.66031		[lb.in.sec ²]
4.7 Solid created by rotation of the profile around the X axis				
4.8 Volume of the solid of revolution	V	1636.141454		[in ³]
4.9 Mass of the solid of revolution	m	461.0169409		[lbf]
4.10 Moment of inertia of the profile to the X axis	Ix'	2021.555067		[in ⁴]
4.11 Mass moment of inertia (axis X)	Imx	30845.36494		[lb.in.sec ²]
